Appendix 2: Prisma flow diagram

Appendix 3: Systematic review summary protocol

Objective							
Primary study question/objective	To perform a systematic review on the short- and long-term outcome of OHC meaning survival and CPC score						
Studies to include							
Study design	Observational studies						
Population	All adults having suffered OHCA, if possible fulfilling all Utstein comparators (cardiac aetiology, bystander-witnessed, shockable rhythm)						
Interventions and Comparator	N/A						
Outcomes	OHCA survival and CPC at discharge, OHCA survival and CPC at 1 year post-arrest						
Other specific in-	Study duration and country: No limits						
clusion/exclusion criteria	Sample size: Studies with a sample size of less than 1000 patients were excluded						
	Studies with other than cardiac causes of OHCA, paediatric studies, and IHCA studies were excluded						
	Study design: Case reports, commentaries, letters to the editor, duplicates and conference abstracts were excluded						
Publication informa	tion						
Language and search timeframe	English and German language, Jan 2000 to April 2018						
Databases	PubMed Jan 2000 to April 2018						
Overview of Inform	ation extracted						
Study information	The first authors' last name, year of publication, title of study, study design, country/region, setting, population studied, inclusion/exclusion criteria, timescale, follow-up period, and type of outcomes reported (survival, neurologic outcome or both)						
Baseline data	Study group sample size						
Data to be ex- tracted	Data on OHCA survival at discharge (in Wissenberg et al.'s study, survival at 30 d instead of discharge) and 1 year						
	Data on OHCA neurologic outcome (CPC) at discharge and 1 year						
OHCA = out-of-hosp category	ital cardiac arrest; IHCA = in-hospital cardiac arrest; CPC = cerebral performance						

Appendix 4: Quality assessment of included cohort studies using the Newcastle-Ottawa scale

First author, year	Selection				Comparabil- ity		Outcome			Total qual-
	Rep- re- sent- ative- ness of ex- posed co- hort	Selection of non- ex- posed co- hort	Ascer- tain- ment of ex- posure	Demon- stration that out- come of in- terest was not present at start of study	Ad- just for age	Ad- just for other fac- tors	As- sess- ment of out- come	Fol- low- up length	Loss to follow- up rate	ity score
