Watching football on TV may potentially be life-threatening

On November 16th 2005 a 57-year-old male patient with known coronary artery disease (CAD) and reduced left ventricular ejection fraction due to a prior anterior myocardial infarction was monitored on the intensive care unit after successful implantation of a single-chamber implantable cardioverter defibrillator (ICD). In the evening, the Swiss football fan was watching the World Cup play-off football game between Turkey and Switzerland on TV. Finally, based on a 2:0 victory in the first leg and two scored away goals, Switzerland reached the qualification for the upcoming World Cup finals in Germany despite a 4:2 victory by the Turkish team. Although the patient remained asymptomatic, continuous recordings of heart rate, ST-segment deviation and the number of premature ventricular complexes were suggestive of mental stress-induced myocardial ischaemia while watching the very thrilling football game (figure 1). It is well known that mental stress may provoke myocardial ischaemia in patients with CAD. Indeed, it has been demonstrated that the combination of physical and mental stress may improve noninvasive detection of myocardial ischaemia in patients with CAD [1]. Notably, myocardial ischaemia may trigger life-threatening arrhythmias. Accordingly, our example demonstrates that watching football on TV is by far not innocuous but may potentially be as hazardous as playing football in susceptible patients with CAD.

Reference

Figure 1
Continuous recordings of heart rate (top), ST-segment deviation (middle) and number of premature ventricular complexes (PVC; bottom) in a patient with CAD and reduced left ventricular function during watching a football game. Note the increase in heart rate, the progressive depression of ST-segments in the inferior ECG leads and the increase in ventricular ectopia, suggestive of myocardial ischemia, particularly during the final 20−30, most thrilling minutes of the game. + goals scored by the Swiss team; ! goals scored by the Turkish team.
The many reasons why you should choose SMW to publish your research

*What Swiss Medical Weekly has to offer:*

- SMW’s impact factor has been steadily rising, to the current 1.537
- Open access to the publication via the Internet, therefore wide audience and impact
- Rapid listing in Medline
- LinkOut-button from PubMed with link to the full text website http://www.smw.ch (direct link from each SMW record in PubMed)
- No-nonsense submission – you submit a single copy of your manuscript by e-mail attachment
- Peer review based on a broad spectrum of international academic referees
- Assistance of our professional statistician for every article with statistical analyses
- Fast peer review, by e-mail exchange with the referees
- Prompt decisions based on weekly conferences of the Editorial Board
- Prompt notification on the status of your manuscript by e-mail
- Professional English copy editing
- No page charges and attractive colour offprints at no extra cost

**Editorial Board**

- Prof. Jean-Michel Dayer, Geneva
- Prof. Peter Gehr, Berne
- Prof. André P. Perruchoud, Basel
- Prof. Andreas Schaffner, Zurich (Editor in chief)
- Prof. Werner Straub, Berne
- Prof. Ludwig von Segesser, Lausanne

**International Advisory Committee**

- Prof. K. E. Juhani Airaksinen, Turku, Finland
- Prof. Anthony Bayes de Luna, Barcelona, Spain
- Prof. Hubert E. Blum, Freiburg, Germany
- Prof. Walter E. Haefeli, Heidelberg, Germany
- Prof. Nino Kuenzli, Los Angeles, USA
- Prof. René Lutter, Amsterdam, The Netherlands
- Prof. Claude Martin, Marseille, France
- Prof. Josef Patsch, Innsbruck, Austria
- Prof. Luigi Tavazzi, Pavia, Italy

We evaluate manuscripts of broad clinical interest from all specialities, including experimental medicine and clinical investigation.

We look forward to receiving your paper!
