Behçet’s disease is a multisystemic inflammatory disorder [1]. Parenchymal (65–81%) and vascular (19–27.5%) forms were defined for neurological involvement [1,2]. Sinus thrombosis and intracranial hypertension are the most common examples of the vascular form [1]. It is very uncommon that these two forms of the disease occur in the same individual [1]. In this report we present a case with neuro-Behçet’s disease (n-BD) that had signs of both clinical forms contemporaneously including aseptic meningitis, venous sinus thrombosis, intracranial hypertension and a callosal lesion.

A 27-year-old male patient presented with headache, papilloedema and neck stiffness. In cranial MRI, superior sagittal sinus thrombosis, prominent meningeal contrast enhancement (figure 1) and a lesion of 1 cm in diameter located in the splenium of the corpus callosum enhancing with gadolinium on T1W and hyperintense on T2W (figure 2a) were seen. CSF pressure was measured as 600 cmH2O; a high lymphocyte count and an increased level of protein were detected. A ten year history of recurrent oral aphthus, genital ulcerations and positive pathergy test directed to Behçet’s disease. Methylprednisolone, azathioprine, acetazolamide were used. Symptoms and signs resolved completely in one year. Follow up MRI revealed complete recanalisation of the thrombosis and disappearance of the callosal lesion (figure 2b).

This case shows that major clinical forms can be seen in the same patient synchronically in n-BD. Isolated hyperintense white matter lesion located in the splenium of the corpus callosum is another interesting point of the case. In the literature only one n-BD case with similar callosal involvement was found [3]. We saw reversible callosal lesions in multiple sclerosis and its variants and but in this patient a detailed history and CSF immunological analysis were not consistent with neither of them.

The many reasons why you should choose SMW to publish your research

**What Swiss Medical Weekly has to offer:**

- SMW’s impact factor has been steadily rising, to the current 1.537
- Open access to the publication via the Internet, therefore wide audience and impact
- Rapid listing in Medline
- LinkOut-button from PubMed with link to the full text website http://www.smw.ch (direct link from each SMW record in PubMed)
- No-nonsense submission – you submit a single copy of your manuscript by e-mail attachment
- Peer review based on a broad spectrum of international academic referees
- Assistance of our professional statistician for every article with statistical analyses
- Fast peer review, by e-mail exchange with the referees
- Prompt decisions based on weekly conferences of the Editorial Board
- Prompt notification on the status of your manuscript by e-mail
- Professional English copy editing
- No page charges and attractive colour offprints at no extra cost

**Editorial Board**

- Prof. Jean-Michel Dayer, Geneva
- Prof. Peter Gehr, Berne
- Prof. André P. Perruchoud, Basel
- Prof. Andreas Schaffner, Zurich (Editor in chief)
- Prof. Werner Straub, Berne
- Prof. Ludwig von Segesser, Lausanne

**International Advisory Committee**

- Prof. K. E. Juhani Airaksinen, Turku, Finland
- Prof. Anthony Bayes de Luna, Barcelona, Spain
- Prof. Hubert E. Blum, Freiburg, Germany
- Prof. Walter E. Haefeli, Heidelberg, Germany
- Prof. Nino Kuenzli, Los Angeles, USA
- Prof. René Lutter, Amsterdam, The Netherlands
- Prof. Claude Martin, Marseille, France
- Prof. Josef Patsch, Innsbruck, Austria
- Prof. Luigi Tavazzi, Pavia, Italy

We evaluate manuscripts of broad clinical interest from all specialities, including experimental medicine and clinical investigation.

We look forward to receiving your paper!
